

hyScore is a Berlin-based independent provider of highly customizable natural language processing solutions and content intelligence.

Our mission is to simplify the access to valuable contextual insights for further usage and processing. This enables technology providers, brands, advertisers, publishers or any other company to analyze relevant content at granular text or url page level and use this data for their specific needs.

The hyScore content intelligence platform

... can proactively analyze complete websites or markets without being integrated into specific websites or environments.

... has a human-like understanding of written text and provides results based on importance.

... uses proprietary, sophisticated deep learning algorithms and models to provide high-quality results.

... stands for individual solutions, reliable services, transparency and fair pricing with full cost control.

... is used across industries, is customizable and is essential for a variety of use cases.

... can be used worldwide and already supports contextual analysis in 20 languages.

hyScore analysis data is accessible directly via the hyScore API or other data management platforms.
